

ARCLINE®
ASPIRE BEYOND

Elevating excellence

through BLDC innovation

DESIGN • QUALITY • COMFORT

Where Efficiency Meets Elegance

ARCLINE - Your premier choice for cutting-edge, affordable fans designed to elevate every space. Our extensive range caters to homes, offices, and leisure areas, offering a fusion of style and functionality. Dive into a world of choices with our fans, available in a spectrum of colors and sizes, blending seamlessly with your lifestyle. Experience not only whisper-quiet performance and energy efficiency but a commitment to excellence that permeates every aspect of our brand.
At Arcline, we go beyond products – we're dedicated to enhancing the quality of life for customers, stake holders, and our valued team.

OUR LEGACY TO ASPIRE BEYOND

Where Innovation Meets Craftsmanship

Welcome to our state-of-the-art manufacturing unit, where cutting-edge technology and a seam less process converge to create exceptional fans & appliances. Spanning over 1 lakh sqft, our facility integrates every step of production under one roof, ensuring efficiency and quality at every stage. With a remarkable production capacity of over 2 lakh fans per month, we proudly stand as one of the leading manufacturers in the industry.

Our commitment to excellence and unwavering focus on quality as our core strength drive us to deliver unparalleled products that meet the highest standards of performance and design.

MANUFACTURING EXCELLENCE

BIS Certification

Your Assurance of Quality and Safety

The Bureau of Indian Standards (BIS) is India's national standardization body, responsible for setting and promoting standards to ensure quality, safety, and efficiency across industries. Established under the BIS Act, 1986, it plays a pivotal role in enhancing product quality, ensuring consumer safety, and facilitating international trade.

IS 374:2019

This standard defines requirements for single-phase, 50 Hz AC ceiling fans driven by squirrel cage induction or brushless DC motors. It applies to fans operating up to 250V for household and similar purposes, with optional speed regulators (manual or remote-controlled).

Key highlights include:

- **Performance Requirements:** Ensures minimum air delivery and service value for optimal efficiency based on fan size
- **Material and Design:** Mandates durable materials for blades and motor components to ensure longevity.
- **Silent Operation:** Focuses on reducing operational noise for user comfort.

- **Testing Protocols:** Comprehensive tests for power input, fan speed, power factor, endurance, and harmonic distortion, ensuring fans meet performance and safety benchmarks.

IS 302-2-80:2017
This standard applies to various fan types, including ceiling, duct, partition, pedestal, and table fans. It also covers fans used in light industry, shops, or farms that may pose safety risks to the public.

Key highlights include:

- **Electrical, Mechanical, and Thermal Hazards:** Protection against electric shock, fire risks, and mechanical injuries caused by moving parts.
- **Construction and Design:** Ensures durable materials, proper insulation, earthing, and resistance to moisture and overheating
- **Mechanical Integrity:** Focuses on the strength of fan blades and housing to prevent failures during operation.

While this standard addresses safety performance, it does not cover performance requirements or apply to kitchen fans, heating units, or air conditioning systems.

Why It Matters:
BIS certification ensures that every Arcline fan complies with stringent quality and safety standards, delivering reliable performance and peace of mind for our customers.

Discover the magic of
BLDC fans

ARCLINE
ASPIRE BEYOND

BLDC Fans

Step into a new era of comfort with our fan collection, featuring state-of-the-art technology - Brushless Direct Current (BLDC). These fans go beyond the ordi nary, using electronic wizardry to operate more efficiently and quietly. With options for both regulator and remote operation, this breakthrough technology ensures longer fan life, minimal maintenance, and a peaceful breeze that enhances your space without any hassle.

Experience the future of fan technology, enjoying a refreshing airflow experience with a touch of modern ingenuity. Choose from our varied range of 5-star-rated BLDC fans for a blend of sophistication, sustainability, and simplicity in every spin.

Cost Saving Guide	Ordinary Fans	Arcline's BLDC Fans
Power Consumption*	75W	26W
Assumed fan usage per day (hours)	16h	16h
Power consumption (Unit per day)	1.2	0.416
Electricity bill per day (₹ 6.50/unit**)	₹7.8	₹2.70
Electricity bill per annum	₹2847	₹986
Savings per annum #		₹1861
Cost saving		65%

Save more than

Rs.1850/-

annually on Electricity Bills^

* The power value is calculated at 6th speed, whereas other specifications have been computed at Boost Mode.
^ Fan voltage range should be 230V, 50HZ, Wattage may vary ± 5%
** May vary from state to state
Actual savings and results may differ based on usage, variations and cost of the electricity.

ARCLINE®
ASPIRE BEYOND

Total Harmonic Distortion (THD)

Precision-Engineered for Superior Performance

Total Harmonic Distortion (THD) is an important metric when assessing the performance and efficiency of electrical appliances, particularly those with motors, electronics, or power supplies.

Here's Why Keeping THD Low Matters:

Energy Savings: Appliances operating under high THD draw more current to per form the same function, leading to higher electricity bills and increased operational costs.

Improved Power Quality: High THD can affect the electrical network, causing voltage fluctuations and cumulative distortion, which impacts the stability of other connected devices.

Longer Appliance Life: High THD stresses internal components like motors and power supplies, leading to overheating and pre mature failure.

Protection for Sensitive Electronics: High THD can interfere with devices like computers and audio equipment, causing malfunctions or performance issues.

Enhanced Efficiency: Appliances with lower THD consume less energy to achieve the same performance, making them more efficient.

Below 10% THD
